SUMMARY

I'm a Full Stack Software Engineer building practical solutions that make everyday tasks easier. I've worked with the MERN, MEAN stack and Django to create tools like a smart university transport system for my campus and a productivity app for people with short-term memory challenges, aligning my experience with office-based collaboration and deployment needs. I focus on writing clean, scalable code and building user-friendly experiences that solve real problems.

WORK EXPERIENCE

Junior Software Engineer July 2025 – Present
AitchTech, Bahawalpur

Magnt – Enterprise AI Chat Application

- Built 6 interactive chart types (line, bar, pie, donut, graph, dot) using Vega Charts.
- Engineered **3-theme system** (light, dark, Magnt-branded) from scratch.
- Delivered bilingual **LTR/RTL layout** support for English and Arabic interfaces.

VaultX – Blockchain Based NFT Platform

- Integrated Privy Wallet to enable secure wallet connection and user authentication.
- Implemented transaction signing and on-chain submission for secure blockchain data storage.
- Connected frontend to backend REST APIs for dynamic, real-time data handling.
- Replaced Zustand with **SWR**, improving data fetching, caching, and revalidation.

PERSONAL PROJECTS

Smart University Bus Information System (FYP) [GitHub]

- Digitized a university's paper-based transportation schedule into a live web platform with an admin panel for route/stop management and telemetry logging.
- Architected a full-stack **distributed microservices system** (NestJS/ PostgreSQL for real-time tracking, Node.js/MongoDB for timetable management) with a React frontend.
- Implemented real-time bus tracking with a custom user clustering algorithm for crowd estimation, automated student alerts and ETA calculations.
- Built **Redis caching** for OTP verification and timetable data, reducing database queries across both services.
- Containerized all services with **Docker**, authored separate Compose

EDUCATION

BS in Computer Science

The Islamia University of Bahawalpur

Aug 2022 – July 2026 · GPA: 3.4

- Appreciation Certificate for serving as Official Member of the IUB Publication Society as a Designer/Editor.
- Shield in recognition of contribution to the BLCF.

SKILLS

Frontend Technologies

ReactJS AngularJS

Backend Technologies

NestJS NodeJS Django ExpressJS
REST APIs

Databases

MongoDB PostgreSQL Redis

Cloud Computing

IAM AMI EC2 S3 RDS Aurora
DynamoDB Route53 Lambda CloudFront
CloudFormation Load Balancer ASG

Deployment Platforms

Vercel Netlify Render Digital Ocean

Version Control

Git GitHub

DevOps & CI/CD

Docker GitHub Actions CI/CD Pipelines

CERTIFICATIONS

Responsive Web Design

files for production and local development environments.

- Set up a **GitHub Actions** CI/CD pipeline triggered only on bus-tracking service changes – builds Docker image and redeploys to AWS EC2 automatically.
- Deployed across **hybrid cloud infrastructure**: bus-tracking on AWS EC2, timetable and frontend on Vercel.

Task AI Studio (MERN) [\[GitHub\]](#)

- Built a productivity app to help users with short-term memory challenges track tasks and receive timely reminders.
- Implemented AI-powered task scheduling that automatically sorts tasks by priority and deadlines to optimize productivity.
- Developed a Node.js-based **WhatsApp bot** that sends task reminders every 3 hours.
- Enabled WhatsApp-based task retrieval using the `what sapp-web js` library.

Ecommerce Website (MERN) [\[GitHub\]](#)

- Converted a WordPress site into a high-performance MERN stack application, improving load time from 57s to **12s** (~78% speed boost).
- Built an admin panel with order, product, and user management.
- Integrated analytics to track visitor engagement and product views.
